

Missing or faded tracks

Check the display, then look for fresh sensor reports.

GAME v0.8.16.0 / ENGLISH

☐ 01 Check time and the area

Finish typing and map choices; close the Escape menu. Check Game Time advances; use 1x if available. Pan with arrow keys; zoom with the wheel over clear map space. Z toggles following hooked tracks: if on, press Z to switch it off.

☐ 02 Clear display filters

If category buttons are visible, click *. Right-click each active identity-bar filter to clear it. Check which contacts return. Use right-click: left-click can change hooked contacts and related raid contacts.

☐ 03 Restore hidden track data

In ASMA, click A/C; this ends an ATC conversation. Press Solo Track Data (Selected/Hooked), default Delete. Read the new reply: SOLO ON means press again for SOLO OFF. With no selection or hooks, a warning means solo was not enabled. If global blocks are off, press X (default). Restored text is not fresh detection.

☐ 04 Check ground radar

Use RADARS to choose a station view; this does not power it on. In ASMA, select INTEL if not highlighted to see RADAR OFFLINE notices. Right-clicking its map marker cycles normal/clutter/off: check after each change. RADAR OFFLINE awaiting repair is locked; clicks cannot repair it.

☐ 05 Check airborne coverage, if used

Find the E-3D on the radar scope; check its callsign and task in ACTIVE OPS. Right-click it: if L11: OFF appears, click once, reopen and check L11: ON. If the menu is disabled, use Flight Info / AC Control. RINGS does not prove reporting.

☐ 06 Compare fresh reports and messages

Watch the last known area and neighbouring contacts. In ASMA, select INTEL if not highlighted. Read BARRAGE JAMMING reports for the named radar. Compare one missing contact with a wider loss; faded tracks may disappear without aircraft destruction.

KEEP IN MIND

New-track and emergency flashing, and the four-triangle IDENT focus, differ from a faded-track warning. Flashing alone does not prove jamming or stale data.

Display switches cannot guarantee fresh reports. Hiding clutter does not stop jamming; old history plots may not return.

Near a base, check ACTIVE OPS and ASSETS for landing. Check custom keys in SETTINGS / KEYBOARD; retain the save and messages if unresolved.

Missing ACTIVE OPS row? Click the highlighted IDENT and TASK badges again to clear both filters.
